

The background image shows a modern building interior. At the top, there is a large, colorful mural with geometric patterns in shades of green, yellow, and red. Below the mural is a large, circular, ornate ceiling fixture. To the right, a wide staircase with a glass railing leads up. In the foreground, there is a long table with chairs, and a person is standing near it. The overall lighting is warm and orange.

Comparison of Heights of ACC Women's Basketball Players

Clint Ricks

- Bachelors in Chemistry - Materials Science from the United States Air Force Academy
- Worked as a Personnel officer in the Air Force in CA, CO, and South Korea
- Outside interest -> I'm really interested in basketball, but also recently in the development of eSports like Super Smash Bros.

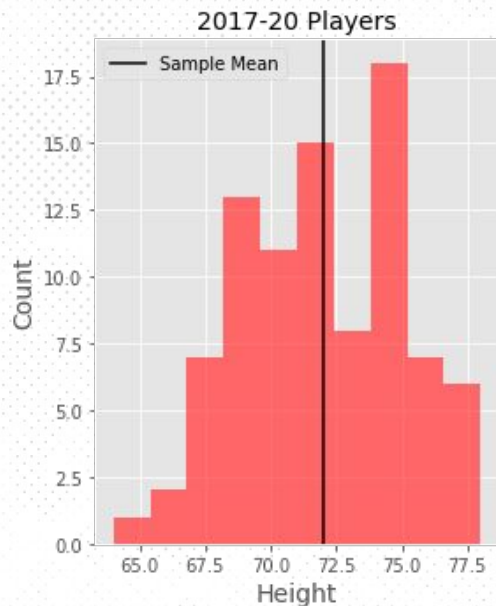

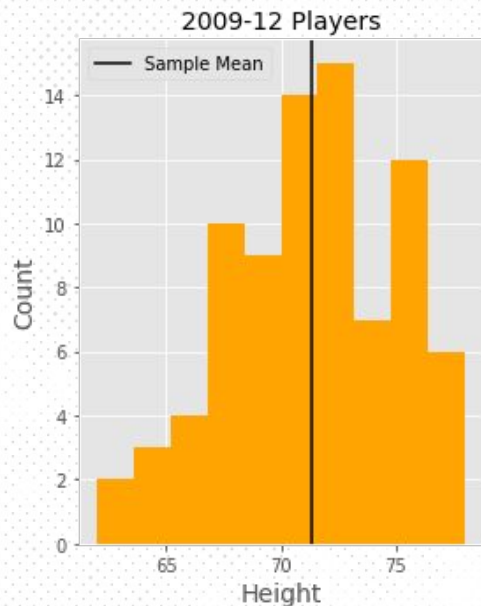

Study

- I wanted to see if there was a difference in player average height between 2009-2012 and 2017-2020
- I scraped data from four team websites within the ACC during both time periods.
-
- I had a null hypothesis that the two populations were equal and used a t-test to test the hypothesis.

Key Result

- I failed to reject the null hypothesis, with a p-value of .079
- The two populations have not been proven to be significantly different
